AI-Powered Statement of Facts (SOF) Generator

Overview

The Statement of Facts (SOF) Generator is an AI-driven platform designed to streamline the intake, drafting, and preparation of case facts for legal professionals. By combining structured client questionnaires, speech-to-text transcription, and AI-assisted drafting, the system automates one of the most time-consuming and error-prone aspects of legal practice: transforming raw client narratives into a clear, chronological, lawyer-ready Statement of Facts.

Problem

Lawyers spend significant time gathering client information through interviews, transcribing notes, and manually drafting SOFs. This process is often inefficient, error-prone, stressful for clients, and redundant when the same facts must be re-entered into tribunal or court forms.

Solution

The SOF Generator provides a structured, client-friendly system that allows clients to submit case details in their own words—either through text input or voice recordings. Using natural language processing (NLP) and legal-focused AI models, the system automatically: 1. Captures and transcribes client input. 2. Extracts key entities such as names, dates, places, and monetary values. 3. Organizes facts into a clear, chronological draft SOF. 4. Flags inconsistencies and missing details for lawyer review. 5. Generates editable drafts in Word or PDF formats for attorney confirmation. 6. Reuses structured data to automatically populate tribunal or court-specific forms.

Key Features

• Customizable Questionnaires per practice area. • Multi-Modal Intake: text or voice with transcription. • AI Fact Structuring: chronological events, entity tagging, contradiction highlighting. • Lawyer Review Dashboard with editing and export options. • Tribunal Form Automation with jurisdiction-specific templates. • Security & Compliance with encrypted storage and privilege protection.

Benefits

For Lawyers: Saves hours, improves accuracy, ensures consistency. For Clients: User-friendly, stress-free way to communicate facts. For Firms: Scales fact-gathering and documentation without extra staff. For the Legal System: Produces standardized, higher-quality SOFs and tribunal forms.

Market Potential

Relevant across multiple practice areas—litigation, employment, family, criminal defense, and corporate disputes. Attractive to solo firms, mid-size practices, large law firms, and legal aid organizations.

Vision

By automating the bridge between client narratives and formal legal documentation, the SOF Generator reduces inefficiency, enhances lawyer productivity, and improves client experience. It represents a step toward AI-augmented legal practice that keeps lawyers firmly in control while leveraging technology to remove repetitive, low-value tasks.
